Introducing Green Literacy, a way of teaching that cultivates critical thinking, reading, and writing about environmentalism through children's books and digital media. Students analyze multiple perspectives, engage in hands-on activities, and come to a deeper understanding of environmental issues. Supported through teaching models and thematic units, educators empower themselves and their students to develop environmental awareness toward sustainable change.

Benefits:

- Explore environmental justice issues using familiar stories and digital tools to spark curiosity and new ideas with reading, writing, and drama strategies for engagement.
- Engage students with activities on weather, ecosystems, and how nature connects individuals and develops systems thinking.
- Encourage students to see environmental issues from all angles to deepen their understanding and empathy and move them toward sustainable change.
- Be empowered with seed ideas about environmental issues, including classroom engagement strategies and professional development opportunities.

Together, we mark our stance as a place where education meets the Earth, showing others that becoming environmentally conscious is our way forward if we want to live in a viable and sustainable future."
